

# FISHING MAGNET SERVICES

War Horse Fishing and Rental Tools offers a wide variety of fishing magnets used in both open and cased hole applications.

Fishing magnets are used to retrieve all types of small objects having magnetic attraction from the wellbore. Such non-drillable objects as bit cones, bearings, slips, tong pins, and milling cuttings can often only be retrieved with a fishing magnet.

War Horse fishing magnets are used during fishing operations and may be short or long term rental items.

There are different guides for the fishing magnets including cut-lip, mill type and flat bottom.

War Horse fishing magnets may be run on pipe or wireline. When fishing magnets are run with pipe, they have the advantage of utilizing the circulation holes in the magnet. Wireline operations have the advantages of speed and economy. Wireline adapters are available to run between the fishing magnet and cable head.
