

FISHING OVERSHOT SERVICES

War Horse Fishing and Rental Tools offers a full line of Series 150 and Series 70 Fishing Overshot Services to engage fish in both open and cased holes.

War Horse Series 150 Series 150 overshot tools are designed to externally engage, pack-off, retrieve, and release various types of fish including tubing, casing, drill pipe, drill collars, couplings, and tool joints. Furthermore, the tools are built for high tension pulls, torsional forces, and jarring without damaging or distorting the tools or fish.

War Horse Series 70 Short Catch Overshot Services are best suited for when the fish is too short to be engaged with a standard overshot. In a Series 70 overshot tool, the grapple control is positioned above the basket grapple thus allowing the basket grapple to occupy the lowest position in the bowl. This enables the overshot to securely engage and retrieve a short fish.

There are a number of other auxiliary components used with the overshot services tools. These include flush and oversized guides with and without internal carbide, spiral grapples, basket grapples, grapple controls, pack-off mechanisms, Type A Packers, mill control packers, inner and outer seals, lock rings, spacers, extension subs, and wall hook guides
