

# FISHING SPEAR SERVICES

War Horse Fishing and Rental Tools offers a full line of Fishing Spear Services that utilize standard releasing spear tools that provide positive means to internally engage and retrieve a fish.

War Horse spears are designed to be rugged, dependable, while providing an inexpensive internal catch fishing tool that has positive engagement, easy release, and re-engagement.

War Horse spears can engage and retrieve tubing, casing, and drill pipe of all sizes. It may be used with other equipment such as spear pack-off assemblies and internal cutters. The spear consists of a mandrel, grapple, releasing ring, and a bull nose nut. The size and type of the upper box connection is furnished according to customer specification.

War Horse offers both one piece and segmented spear grapples. The one piece grapples are made to engage a specific size and weight of pipe and to provide maximum surface area engagement while minimizing distortion of the fish. The benefit of a segmented grapple is that it provides an extended pipe catching range beyond the maximum range of a one piece grapple.

War Horse fishing spears can be equipped with a sub type nut which allows an internal cutter or spear pack-off assembly to be run below the spear.
