

# MUD PUMPS AND TANKS

War Horse Fishing and Rental Tools offers mud pumps and open top tanks for use during fishing and drill-out operations.

War Horse mud pumps are a self-contained, skid mounted reciprocating piston/plunger triplex pump connected to a diesel engine and transmission with all associated fluid tanks and connections. War Horse mud pumps are used to circulate fluids (water to drilling mud) and for pressure testing at the wellsite.

Characteristics of War Horse mud pumps are:

- Simple design and layout for smooth operation, low vibration, easy disassembly and maintenance, and reduced noise.
- Delivery of high concentration and high viscosity suspended slurry fluids.
- Stable flow with no overcurrent, pulsation, or shear slurry.
- Discharge independent of speed thus low flow, high discharge pressure is possible.
- Displacement proportional to the pump RPM and setup.

War Horse also offers open-top, skid mounted 80 to 120 barrel tanks that can be equipped with “gas buster”. These tanks are often used in conjunction with the mud pumps on fishing and drill-out jobs. War Horse also has all of the auxiliary high and low pressure hoses required for the mud pumps and tanks.
